The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakamura.

Nakamura et al shows a stacked semiconductor device comprising a substrate 2 having a conductor pattern (see col.2, lines 36-37, 39-40) and a cavity having a first top die 1 therein and electrically connected to the conductor pattern via wires 3. A second bottom die 1 is shown stacked on the first die and electrically connected to the conductor pattern via wires 3 and a insulating layer sealing resin 4 is provided on the substrate and cover the first die and second die (see col. 5, 58-64). An adhesive resin layer 4 can also be formed between the first and second die (see col.2, lines 56-57). First and second dies are shown one on top of the other and they therefore cross each other.

Claims 1-11 are rejected.

Fogal et al, Morinaga et al, Suh et al are cited to show stacked chips formed in substrate cavities.
